## Functional test procedure for a 4136J56G0001 Card

### 1. SCOPE

1.1 This is a functional testing procedure for a 4136J56G0001 Card.

### 2. STANDARDS OF QUALITY

2.1 Refer to the current revision of the IPC-A-610 standard for workmanship standards.

### 3. APPLICABLE DOCUMENTS

3.1 The following document(s) shall form part of this specification to the extent specified herein. Unless otherwise indicated, the latest issue shall apply.

3.1.1

### 4. ENGINEERING REQUIREMENTS

#### 4.1 Equipment Cleaning

4.1.1 Equipment should be clean and free of debris prior to applying power unless performing an initial check. Refer to the local documented procedures for cleaning guidelines.

#### 4.2 Equipment Inspection

4.2.1 Equipment should be visually inspected for any defects prior to applying power. This inspection should include the following as a minimum:

4.2.1.1 Wires broken or cracked

4.2.1.2 Terminal strips / connectors broken or cracked

4.2.1.3 Loose wires

4.2.1.4 Components visually damaged

4.2.1.5 Capacitors leaking

4.2.1.6 Solder joints damaged or cold

4.2.1.7 Circuit board burned or de-laminated

4.2.1.8 Printed wire runs burned or damaged

### 5. EQUIPMENT REQUIRED

5.1 The following equipment is required to perform the process requirements. Equipment may be substituted provided that all accuracy's and test ratios are equivalent or better.

| Qty | Reference # | Description                  |
|-----|-------------|------------------------------|
| 1   |             | Fluke 85 DMM (or Equivalent) |
|     |             |                              |
|     |             |                              |
|     |             |                              |
|     |             |                              |

|   |   |                           |
|---|---|---------------------------|

|---|---|---------------------------|

## 6. TESTING PROCESS

### 6.1 Setup

**6.1.1** Hook up power supplies and S1-S10 per the test setup drawing. Hook up the 500 ohm resistors from pins 38 to 41 to 26v per drawing but leave the other pins open.

**6.1.2** Follow the test steps and the chart, operating the switches and checking the voltages on the pins corresponding to the LED state. Frequencies are checked on the Fluke on DC hertz.

**Note:** When the test calls for a particular LED to be on or off, check the voltage at the pin the LED is connected to per the test drawing. Pin low – LED on. Pin high – LED off. Blinking slow or fast can be determined by watching the voltage change rate of a pin that is to be flashing slow or fast.

### 6.2 Testing Procedure

**6.2.1** See Attached. Follow the test steps and the test table, operating the switches and checking the voltages on the pins corresponding to the LED indicated.

### 6.3 \*\*\*TEST COMPLETE\*\*\*

|                         |                      | .7 _____                      |

REMARKS: Added step 4.6 JAW 2/26/85

2.0 SET-UP

- 2.1 CONNECT UP +5, +15, +26, AND COM TO TEST KIT.  
2.2 SET ALL SWITCHES OFF.  
2.3 PLUG BOARD INTO TEST KIT.

HOOK UP 500 Ω RESISTORS PER  
DRAWING & HOOK UP SWITCHES ALSO.  
LEAVE OTHER LEADS OFF.  
PIN LOW = LED ON PIN HIGH = LED OFF

3.0 TEST

- 3.1 CONNECT A 1K RESISTOR FROM COMMON TO THE FOLLOWING PINS, ONE AT A TIME.  
THE VOLTAGE AT EACH PIN WILL BE +.4 TO +.65 VDC.  
PINS 5, 9, 10, 11, 12, 23, 24, 26, 28 +0.75 RPH  
3.2 CONNECT A 1K RESISTOR FROM COMMON TO THE FOLLOWING PINS, ONE AT A TIME.  
THE VOLTAGE AT EACH PIN WILL BE +.5 TO +.8 VDC.  
PINS 8, 13, 14, 15. Remove resistor.

4.0 FREQUENCY ADJUST

- 4.1 TURN S5 ON.  
4.2 TURN S7 ON, THEN OFF. ALL LEDES OUT.  
4.3 TURN S6 ON, THEN OFF. LED 3 ON.  
4.4 TURN S1 ON. ADJ R16 FOR 13 HZ AT PIN 32.  
4.5 TURN S1 OFF. S2 ON. ADJ R15 FOR 130 HZ AT PIN 32.  
4.6 TURN S5 OFF. 13 HZ AT PIN 32. TURN S5 ON.

5.0 CHANNEL CHECKS

- 5.1 TURN S5 OFF. S2 OFF.

SET SWITCHES PER FOLLOWING TABLE AND CHECK THAT ONLY THE LEDES CALLED  
FOR ARE ON, OR TURNING OFF AND ON.
