REV  
NO. 0

P24B-AL-4829

TITLE

PROCESS INSTRUCTIONS FOR TESTING THE BYPASS  
VALVE TEST AMPLIFIER CIRCUIT BOARD

CONT ON SHEET -

SH NO. 2

FIRST MADE FOR DRAWING 945D829G1

REVISIO

- (14) Place S1, S2, and S3 in the open position.
- (15) Turn R20 to the full clockwise position.
- (16) Adjust R21 for -1.0 volts at TP4. Wait until the voltage at TP4 stabilizes before further adjustment of R21.
- (17) Adjust R20 for +1.0 volts at TP2.
- (18) Adjust R19 for -2.0 volts at TP1.
- (19) Close S2. The voltage at TP4 should increase linearly with time. Clock the time required to increase from 0.00 to +5.0 volts.
- (20) Open S2. The voltage at TP4 should decrease linearly with time. Clock the time required to decrease from +5.0 to 0.00 volts.
- (21) Repeat steps 19 and 20. Adjusting R19 for increasing voltages and R20 for decreasing voltages, until both of the times are between 10.0 and 10.5 seconds. An adjustment of R20 may require a readjustment of R19.
- (22) Close switches S1 and S3.
- (23) Adjust R22 for -0.75 volts at TP4.
- (24) Remove all test equipment.
- (25) Remove the circuit board from the test fixture and identify it with a suitable mark to indicate that it has been tested and adjusted in accordance with this instruction.
